

Confirmation of workpiece on removable jig placed on pallet. (2 air gaps transmission)

Previous problems

- Desire to share same pallets for multiple designs of workpieces by changing jigs.
- Desire to confirm seating signals from jigs.

After improvement

- Cost saving by sharing same pallets.
- Simple no hardwired and fast change-outs of jigs.

Application Jigs are replaced according to shape of workpieces, reducing preparation time. Remote System sends power to proximity switches on the jig and transmits their signals through 2 steps of <fixed side>-<pallet>-<jig>.
